

## WELCOME TO OUR Monthly Newsletter

Autumn is such a beautiful time of year. We have been pretty lucky to enjoy some nice sunny days. I am sure the chilly mornings will set in soon (we have already had a couple of -2 where I am). Very hard to get out of bed on those days!

As Bruce mentioned, we had a very busy and enjoyable time in Adelaide. I love getting out and delivering courses. This was on my way back from my walk one night - very quiet!

We have been working closely with organisations in SA, QLD, WA and VIC to deliver onsite courses for their staff. By having an onsite course, the cost is reduced and the course can be customised to suit your needs.

↓ In this newsletter you will find:

Out and about, SIP programs and course dates. Keep reading!

# Out and about

Everywhere we deliver training is different. We recently utilised Hampton Community Centre training rooms, with their nice bright, sunny rooms making it a perfect environment to get plastered. Morning tea and coffees were delivered to us by a local coffee shop and then a short two min walk for lunch at a local cafe/restaurant which served some very health food for our group.

Likewise, our participants in Wangaratta last week were spoiled with a great selection of food including sandwiches, dumplings, arancini balls and amazing salads. We try our best to make each course the best we can and having good food during our breaks makes the day more enjoyable and importantly reinvigorates everyone for the next session.

Last month we had a great time delivering various training sessions in Adelaide. Marg as usual delivered exceptional sessions in adult and paediatric ALS training for several urgent care centres from the ForHealth group. We also delivered a SIP program which included a limb splinting session, IDC insertion male and female, IV cannulation and rhythm recognition. On top of this, we delivered fracture management and suturing as independent courses all in five days. It was a very busy week which is soon to be repeated as we are back in Adelaide in June for another full week of course facilitation.

## Clinician Humour

I came across this image while googling around and couldn't resist sharing it. This must be the ultimate multipurpose creative cast I have ever seen. I can see the benefit but just can't stop wondering how they can sleep with that on. 😂

## How does SIP work?

We know healthcare is very busy, so we have designed the skills to have an online component to complete prior to attending the practical day (or half day) so your staff can get more out of the time at training.

## About Us

Health Education Collaborative is a clinician owned organisation with a team of dedicated health professionals able to provide a vast range of skills.

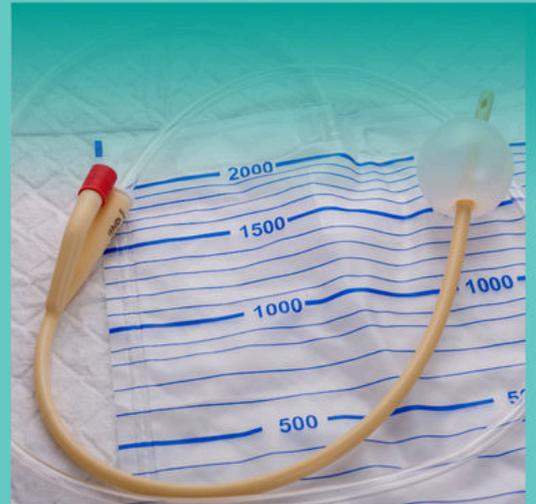

We come to your organisation and train your people in their own environment. Teams have the opportunity to learn new skills and practice together.

## Skills into Practice (SIP)

You create the clinical skills day that your organisation requires. Skills include (but not limited to) deteriorating patient, intravenous cannulation (IV) insertion, indwelling catheter (IDC) insertion, rhythm recognition, performing an ECG, ear assessment and ankle brachial index (ABI) assessment.

## Our Motto

We deliver professional training in a relaxed atmosphere to enhance the skills and services in your organisation.

## Upcoming Courses

14 June @ 8:30 am

Recognition of the seriously ill child and ALS Melbourne VIC  
14 June 2024

Alfred Simulation Centre Level 4 89 Commercial Rd, Melbourne, VIC, Australia

RSVP NOW

20 June @ 8:45 am

NHET-Sim C2: Being a Simulation Educator Hobart  
Friday 20 June 2025

Rydges Hobart Corner Argyle & Lewis Street, Hobart, Tasmania, Australia

RSVP NOW

21 June @ 8:30 am
